

LIAIGRE

Care and Maintenance

Stone - Lava Stone

Cleaning Product(s):

Soft brush

Neutral soap

Clean, white, lintless cotton cloth

Instructions:

Gently brush away dust with a soft brush. For a deeper clean, use a soft brush with water and neutral soap. Wipe off excess moisture and soap with a dry cloth. If a stain persists, consult a stone specialist.

Notes:

We suggest covering stone when not in use to avoid prolonged exposure to dirt and water. Never scratch the stone with an abrasive, sandpaper or steel wool that could alter its appearance and do not use harsh chemical cleaners or oil based products. Immediately remove all soap residue and dry thoroughly using a sponge or dry mop when cleaning. Keep the stone away from acidic liquids (soda, alcohol, vinegar, lemon). In case of spills, quickly wipe up the liquid and do not allow it to dry. Grease can penetrate into the stone and leave dark spots.

Yearly Maintenance:

The lava stone is protected by a layer of water repellent or patina but it is advisable to repeat the treatment annually with a specialist.
