

LIAIGRE

Care and Maintenance

Teak - Natural

Cleaning Product(s):

pH neutral soap

Cotton cloth or soft brush

320 grit sandpaper

Instructions:

Use a soft brush to remove light traces of dirt. For a deeper clean, dampen a clean, white lintless cotton cloth. Lather pH neutral soap into damp cloth and wipe teak surface along the grain. Hose surface lightly to remove excess soap or use an additional clean, damp cloth. If a stain persists, 320 grit sandpaper, rubbed along the grain of the wood can gently remove the blemish.

Notes:

Will weather naturally with time. Keep covered when not in regular use.
