## Care and Maintenance

### Wood - Wirebrushed

#### Cleaning Product(s):

Feather duster or vacuum with soft, clean brush attachment that has never been exposed to chemicals.

#### Instructions:

With a feather duster or vacuum with a soft, clean brush attachment that has never been exposed to chemicals, carefully dust the wood, moving in line with the grain.

#### Notes:

Never use a cloth or microfiber on wirebrushed woods as the wood can splinter. As with all wooden furniture, wet objects (ice bucket, vase, wet glasses...) should not be placed directly on table tops. Any liquids and especially alcohols spilled on the surface should be wiped off immediately. Since wood is a living material, significant hygrometric changes and prolonged exposure to sunlight or moonlight can alter the original structure and initial hues.
